Description of activities	<p>VÍTKOVICE MACHINERY GROUP is the most important Czech engineering group with a strong position in selected segments of machinery production and in the area of supplies of large investment assemblies. The group has a modern, extensive and unique production base and know-how based on research and development. Traditional manufacturing of products in series and engineering fields were complemented with two new areas: Green Technology - CNG and biogas and information technologies. The basic structural element of BGS made by VÍTKOVICE consists of large capacity tanks made of our enameled plates with bolted joints. These tanks have been produced for more than 40 years and give our biogas stations their characteristic and unique properties. Over this period of time our company has implemented more than 15,000 pieces of these tanks. The heart of a BGS then consists of enameled anaerobic reactors (fermenters), which contain many of our patents and industrial designs.</p>
